Molecular Microbiology

SARS-COV-2 Virus (Covid 19) **Not detected (Negative)** Not Detected

Method: RT-PCR

Sample Source:

Nasopharyngeal

INTERPRETATION MR. JANARTHANAN SAMINADHAN

Not Detected result indicates SARS-Cov2-Virus not present in specimen. Results do not rule out the (Negative) PCR inhibitors, mutations in the patient specimen or assay specific nucleic acid in concentrations below the level of detection by the assay.

results are indicative of the presence of SARS-CoV-2 RNA in specimen submitted. Due to the **Detected (Positive)** acid amplification methodologies, there may be a risk of false positive results.

Clinical

correlation with patient history and other diagnostic information is necessary to determine patient infection status. result indicates that one of multiple gene is detected or a low viral load is possible. Patient needs to self-quarantine and the sample should be repeated in 72 hours for confirmation with clinical correlation

Presumptive Positive

Note: Reliable results are dependent on adequate specimen collection, transport, storage, and handling. The Covid test conducted as per Kit approved by DHA
